Untiefe

nautical ambient reverb

Dive into vernesque depths

The Untiefe is a modulated ambient reverb offering three distinct room/sizes with the option to blend in phaser, tremolo or chorus&shimmer into the trails.

The Untiefe is a huge and lush sounding ambient reverb that creates unique textures by blending natural sounding reverbs with different classic modulation effects:

- phaser is a big room reverb with the option to send the reverb through a classic Mu-Tron inspired 4-stage phaser: create liquid sounding textures or otherworldly space reverbs with the help of smooth and warm phase-shifting;

- shiver is an even bigger sounding plate reverb that can create meandering movements with the help of a classic tremolo: everything from smooth swaying verbs to choppy on/off-style tremolos are available here;

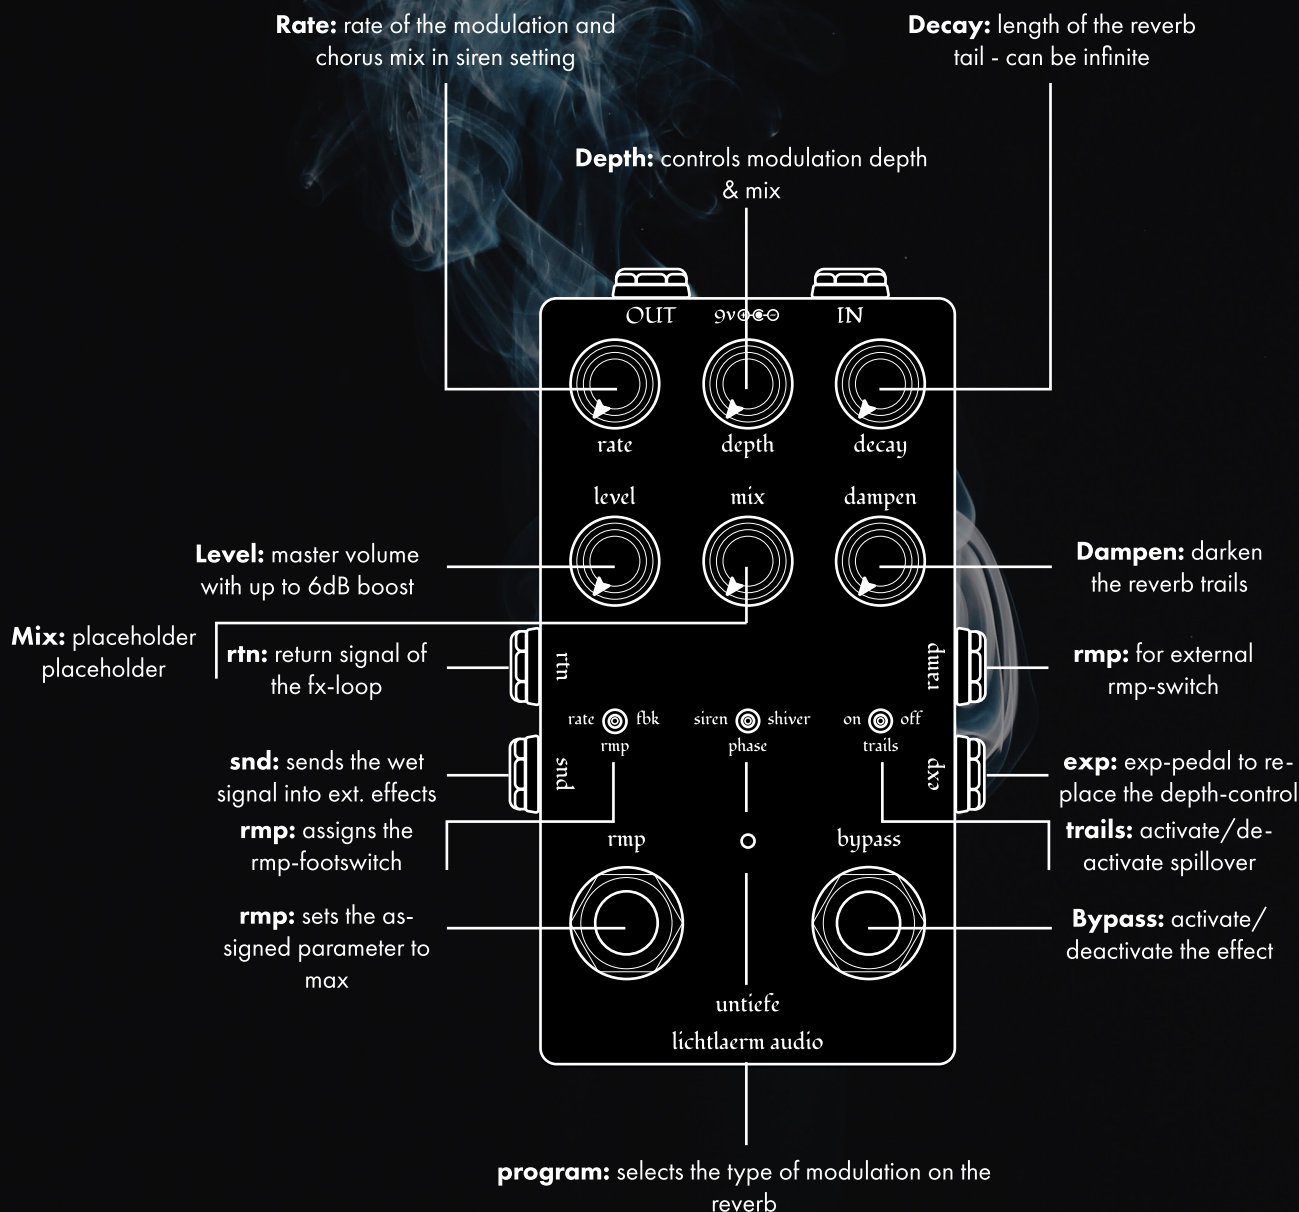

- siren is based on the absolute shoegaze classic: the soft focus patch that utilizes a chorus which is controlled with the rate pot and a shimmer that can be blended in with the depth pot.

The Untiefe is capable of both subtle room-reverbs and endless washes of reverb with it's endless decay, 0-100% mix control: create big pads or extreme momentary modulations with the ramp switch or replicate freeze-style effects by utilizing our SmartRelay-System!

The reverb trails can be modified with both the dampen knob for bright or dark and moody feels and the exp-control-able modulation creates sounds that are normally only accessible through parallel fx-chains. If you want to add external effects into that mix just create your own modulated verbs with the fx-loop.

Of course we also added switchable spill-over and a level control to make the Untiefe work in any setup and even as a boost!

So dive in and let it take you 20.000 leagues beneath the sea!

phaser: Mu-Tron inspired 4-stage phaser
- siren: soft focus inspired shimmer/chorus
- shiver: tremolo
